

ABSTRACT OF THE DISCLOSURE

A device, system, and method are provided for flavoring a food product. A dissolvable flavoring capsule comprises a capsule and a dissolvable flavoring mixture disposed within the capsule. The dissolvable flavoring mixture may include a filler and a flavoring additive. In operation, the dissolvable flavoring capsule may be placed in a food product and allowed to dissolve. The flavoring mixture permeates the food product, adding flavor to the food product. The dissolvable flavoring capsule may include an assortment of flavors. Consequently, a plurality of dissolvable flavoring capsules of different flavors may be combined to create a desired flavoring. In addition, the dissolvable flavoring capsule may be colored to correspond to the flavor of the dissolvable flavoring mixture.
